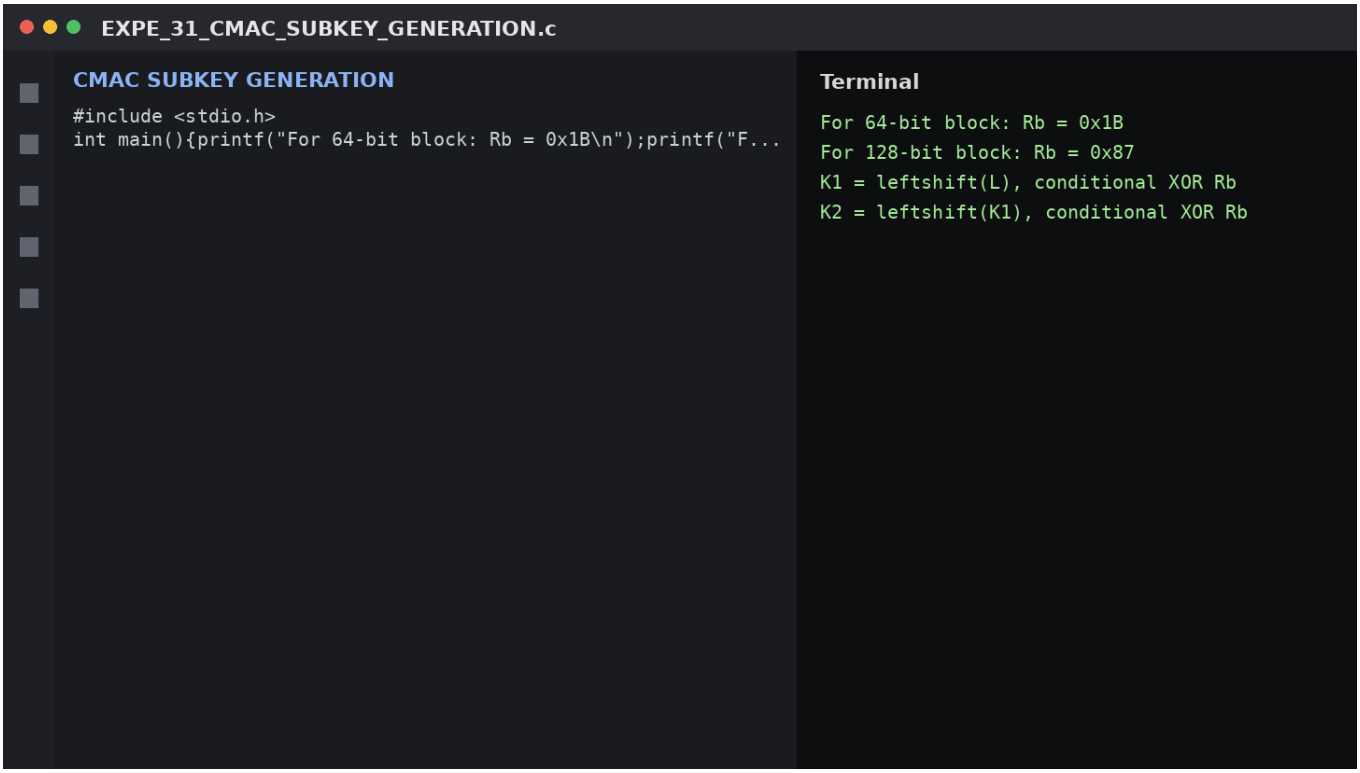
EXPERIMENT 31 – CMAC SUBKEY GENERATION

C Program

```
#include <stdio.h>
int main(){printf("For 64-bit block: Rb = 0x1B\n");printf("For 128-bit block: Rb = 0x87\n");printf("K1 = leftshift(L), conditional XOR Rb\nK
```

Execution Screenshot



Output

```
For 64-bit block: Rb = 0x1B
For 128-bit block: Rb = 0x87
K1 = leftshift(L), conditional XOR Rb
K2 = leftshift(K1), conditional XOR Rb
```
