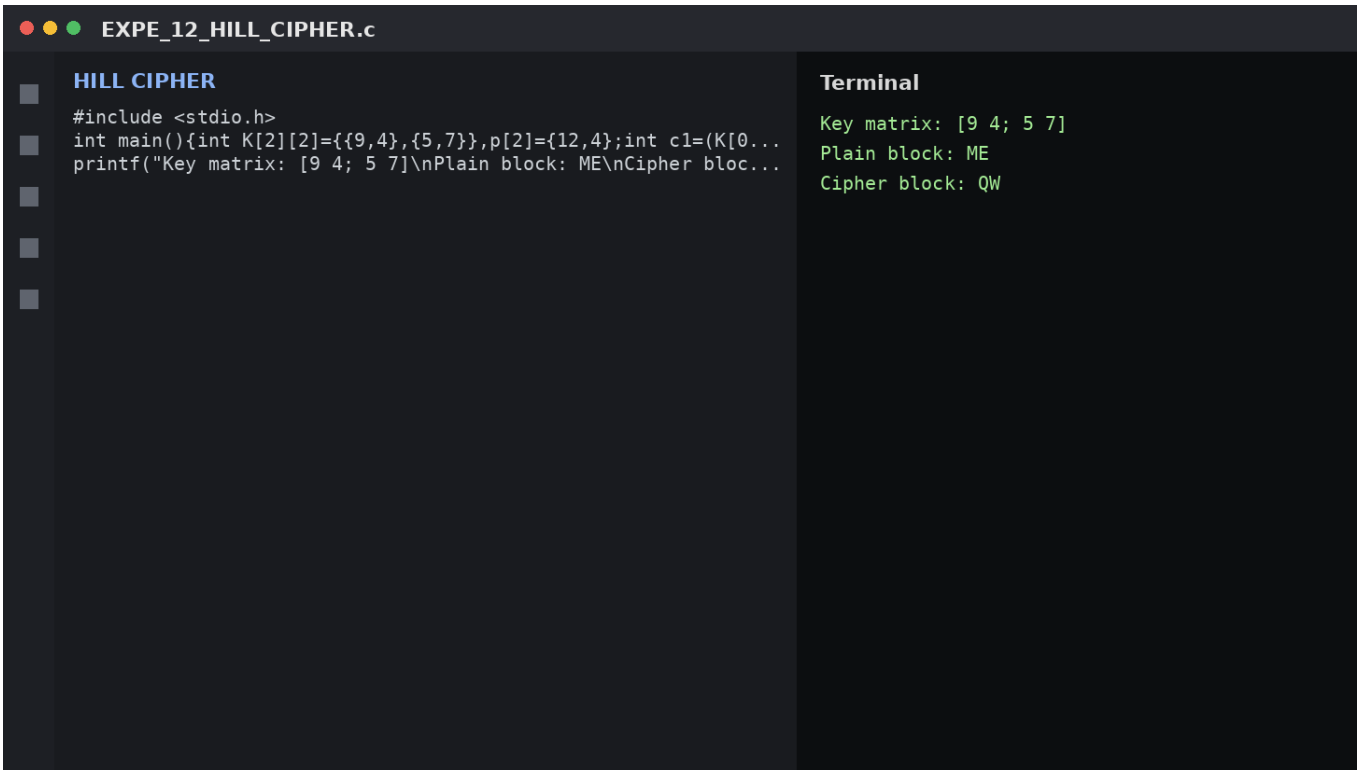
EXPERIMENT 12 – HILL CIPHER

C Program

```
#include <stdio.h>
int main(){int K[2][2]={{9,4},{5,7}},p[2]={12,4};int c1=(K[0][0]*p[0]+K[0][1]*p[1])%26,c2=(K[1][0]*p[0]+K[1][1]*p[1])%26;
printf("Key matrix: [9 4; 5 7]\nPlain block: ME\nCipher block: %c%c\n",'A'+c1,'A'+c2);return 0;}
```

Execution Screenshot



Output

```
Key matrix: [9 4; 5 7]
Plain block: ME
Cipher block: QW
```
