EXPERIMENT 25 – RSA COMMON FACTOR

C Program

```
#include <stdio.h>
int main(){printf("Given gcd(m,n) != 1.\n");printf("Compute gcd of the plaintext block and n.\n");printf("The non-trivial factor reveals a fa
```

Execution Screenshot

Output

```
Given gcd(m,n) != 1.
Compute gcd of the plaintext block and n.
The non-trivial factor reveals a factor of n, breaking RSA.
```
